

Power Bite Kit

Product Description

Power Bite is a low foaming, heavy-duty liquid floor cleaner formulated for manufacturing facilities, warehouses, and shop floors. Power Bite was engineered for automatic floor scrubbers to prevent excess foam problems. Power Bite provides extra penetration of the toughest grease and oil laden floors and will not remove or harm common shop floor sealants.

Performance Features

- Penetrates and removes heavy greases, oils, lubricants, and tire marks
- Will not attack concrete
- Packaged as an EZ Kit to eliminate freight costs and storage requirements

Physical Specifications

Physical State	Liquid
Appearance	Amber
pH	≈ 13
Rinsability	Excellent

Equipment Requirements

Power Bite is safe for use with all standard cleaning equipment. Equipment should be operated according to the manufacturer's instructions.

Product Make-Up

Power Bite is the concentrated version of Seacole's Total. Packaged as an EZ Kit with two parts. When both parts are combined Power Bite can be diluted with water to make 30 gallons of Seacole's Total. **Power Bite must be diluted with water prior to use.**

Concentration and Application Method

Dilutions Requirements

Power Bite must first be diluted with water prior to use. Mix equal amounts of Part A and Part B together with 25 gallons of water. This solution can then be used at different concentrations depending on application.

General Maintenance

Use Power Bite at a use concentration of 3%–20% by volume depending on the nature, make-up and extent of the soils to be removed. The use of HOT water increases performance. Apply to the surface to be cleaned with the desired application method. Follow with a thorough water rinse.

Mop/Bucket

For heavy duty shop floor cleaning, add 10%–20% by volume of Power Bite to a mop bucket filled with HOT clean water. Apply to the surface to be cleaned with mop or brush. Where soil deposits are heavy, let soak for 5 to 15 minutes and brush if possible. Follow with additional mopping or a thorough hose or high- pressure water rinse. For additional soil removal, wet-vacuum dry-cleaned area.

Automatic Floor Scrubbers

For heavy duty shop floor & hard surface cleaning, add 10%–20% by volume of Power Bite to the already water filled solution tank. Adding Power Bite to the tank after filling with water will diminish foam production. Hot water temperatures for most plastic-tanked scrubbers should not exceed 140° F. Where soil deposits are heavy, a double pass may be necessary. Rinse with clean water. Operation of equipment should be done in accordance with the equipment manufacturer's instructions.
